Calibel is an insulation board made up of a thick base of glass mineral wool assuring excellent, thermal and acoustic insulation finished with a plasterboard lining.

| |
|---|
| Airbourne sound |
| When sound travels within air movement |
| Impact sound reduction |
| Isolating impact from foot traffic |
| Flanking sound |
| When sound travels over, under and around stud partitions and through floors at perimeter edges |

| Accessories |
|---------------------------------|
| Isolation batten strips |
| Acoustic mastic |
| Airtight sealants |
| Electrical sockets - Putty pads |
| Stick pins |
| Resilliant bar |

Insulation Tips

The insulation layer must always fit tightly (snug fit) between timber structures to maintain long term energy efficiency
Rain noise levels may be reduced depending on your choice of insulation materials

Stonewool - Mineral wool A1 Non combustable insulation materials

Tissue facing available to order - Allow 7 to 10 working days

Add €4.80 per m2

Acoustic building solution tips

The plasterboard layer is the first line of defence
 Two layers of plasterboard is better than one (increased density)
 Sound intrusion is best tackled from source
 Gaps between the insulation layer and the construction layers will reduce acoustic performance
 Resilliant bars will improve the overall acoustic performance of the wall or ceiling
 Putty pads can reduce the risk of flanking sound through electrical sockets and switches
 Acoustic mastic can reduce the risk of flanking sound above, below and around the partition

Accessories

Acoustic sealant
 Airtight tapes
 Isolation strips
 Resilliant bar

Fire Safe and Fire Stop are not the same

Fire Safe typically relates to a Non Combustable material that will not add to the fire load of a burning structure

Fire Barrier and Fire Stop are not the same

Not all Non Combustable mineral wool insulation materials will provide a Fire Barrier or Fire Stop

A Fire Stop is designed, tested and certifiable for use as a Fire stop

A Smoke and Fire Stop is designed, tested and certifiable for use as a Smoke and Fire Stop

Smoke Kills Before Fire

The energy in our homes and offices is lost through **Conduction, Convection** and **Radiant** heat loss.

Actis Hybrid range provides protection against all three.

Reflective insulation protects against heat loss in winter and excessive heat gain in summer.

A three in one solution providing optimum thermal protection.

| | Breathable (wall) | 0.5 | 3.000 | 100 | 300 | 300.00 |

NOTE:

A good quality breathable (**vapour open**) roof and wall membrane will reduce the risk of moisture buildup and condensation in the home.

A reflective breathable (**Vapour open**) wall and roof membrane will increase the overall thermal performance of the roof or wall.

A good quality vapour control / airtight membrane will help reduce heating bills. Reducing heat loss through convection.

The insulation layer, vapour control membrane, tapes and sealants, ventilation and the breathability of the structure, are all equally important. A good insulation and associated building materials specification is key to achieving an energy efficient home.

Knauf Drywall BRIO Flooring System

Key Facts

- Allows underfloor heat through with minimum resistance and maximum efficiency
- Makes room temperature more responsive to control
- Allows UFH systems to run at lower temperatures
- Reduces CO2 emissions by 500kg per house, per year*

*Compared to 22mm chipboard, Independent test data Knauf Insulations

Details available from Knauf Drywall.

- It's a dry construction element
- Requires no water or wet trades
- Easy to install requires no additional specialist trades
- Can be installed and ready for foot traffic within hours
- No drying times, no delays
- Better health and safety on site.

Brio reduces noise underfoot - and in the rooms below

Knauf Brio is an engineered gypsum flooring panel with 60% recycled content, specially developed for use in new or refurbished residential and commercial buildings. It sounds almost too good to be true.

It's a strong, lightweight and quickly-installed dry screed system.

Brio has a very high thermal conductivity ($R = 0.38 \text{ W/mK}$) so heating response times are quicker and energy use is reduced.

Once installed, Brio creates a robust monolithic floor with a high density of 1100 - 1200 kg/m³, and so reduces impact and airborne sound transmission. With a wholly dry installation process, Brio maximises on-site efficiency too. And it's backed by Knauf's unrivalled service and support.
